2				④		
3		⑤		⑥		⑦
4			⑧			
5	⑨					⑩

The diagram illustrates the stack frame structure with three registers: PTR, IDX, and VAL. Each register is represented as a horizontal array of cells.

- PTR (Program Counter):** A 7-cell array. The first cell (index 0) is highlighted in green and contains the value 0. The second cell (index 1) is highlighted in blue and contains the value 1. The remaining cells (indices 2-6) contain the value 1.
- IDX (Index Register):** A 10-cell array. The first cell (index 0) is highlighted in red and contains the value 0. The remaining cells (indices 1-9) are empty.
- VAL (Value Register):** A 10-cell array. The first cell (index 0) is highlighted in red and contains the value 1. The remaining cells (indices 1-9) are empty.

Vertical lines connect the highlighted cells across the registers: a green line connects PTR[0] to VAL[0], and a blue line connects PTR[1] to VAL[0].
